WOODCRAFT BUILDING’S METAL COLOR / ROOFING OPTIONS

DELIVERY/SITE PREPERATION

DELIVERY
Not A Problem.
We Deliver!

Standard Free Delivery Includes:

- Ability to access location with our equipment.
- Any openings we need to take your building through must be at least one foot wider than the building width.
- Setting the building on your level site.
- Delivery date will be synchronized with your local delivery driver's schedule.
- Free delivery with in 50 miles of closest dealer.

Some Additional Items to Consider:

- We reserve the right to reschedule a delivery if the ground conditions aren't adequate for a safe, non-destructive delivery.
- Woodcraft Storage Buildings is not responsible for damages to yards, driveways, and or ground utilities.
- Customer is responsible for all code restraints or property permits.
- We don't deliver on Saturday afternoons or Sunday.
- Our professional driver performs many deliveries and your cooperation with these steps will help insure a pleasant delivery experience.

SITE PREPERATION INFO

A good foundation is what your building rests upon and it is very important in keeping everything level and maintenance free for years to come. Start by checking your local building codes to make sure you don't have problems with having a building added to your property. Preparing your site is your responsibility before your building is delivered to you.

Our Recommendations:

1. The best pad is a level 4" to 5" thick concrete pad, which is solid, durable and eye appealing, but this is also the most costly way to go.
2. A foundation of Concrete pillars is a good option for your larger buildings. Have the pillars go 36" to 48" into the ground with the top of all the pillars level and even with each other. Have pillars under each treated skid of the building, spaced every 6' to 8' apart. Ask your dealer for the placement of the skids on your building.
3. A gravel pad is a much more popular and economical way to prepare your site and will also allow for proper drainage of water that will run off the roof of your building. You will want a level pad that is about 24" wider and longer than the dimensions of your building. To prepare a gravel base, remove the sod and level the site by removing dirt where necessary, and spread the gravel to a depth of about 4". Tamp the gravel down until it is evenly distributed and the site is flat and level. A "frame" of pressure treated 4 x 6's, railroad ties, or cement blocks will keep the gravel in place and create a neater appearance; however it is not required. We do not recommend using sand or pea gravel for your site.
4. If you are getting a smaller building, you can set it on concrete blocks. The customer is responsible for supplying the blocks and then we will set in on the blocks for you. We recommend the solid concrete blocks that measure 4" x 8"x 16". It's always a good idea to get more blocks than what you expect you will need. Unused blocks can be returned.

Customers are responsible to trim or tie back tree branches to create an open passage for the vehicle and building. Make sure objects that are not clearly visible are marked by flags for safe maneuvering (such as lawn sprinklers, pipes, wires etc.). If a property line is to be crossed, the customer is responsible to make necessary arrangements with neighbors prior to the deliver of the building.

DURATION PAINT

Paint Used on Buildings with Wood Siding

Duration Key Benefits

- Formulated with PermaLast™ Technology — for more durability and a thicker coat than ordinary latex paints
- Excellent protection from cracking, peeling, blistering and dirt pick up
- Flash rust resistance minimizes nail head rusting and its tannin bleed resistance is better than conventional latex paints
- Self-priming — use one coat for repaints and two coats for unpainted surfaces
- Meets the most stringent VOC regulations
- Limited Lifetime Warranty

OVER 1000 COLORS!

Got a Favorite Paint Chip?
We'll Match it with Sherwin Williams Duration Paint!

LP SMART SIDING
Siding Used on Wood Buildings

LP
BUILDING SOLUTIONS

LP® SmartSide® products deliver all the warmth and beauty of traditional wood, plus the durability and workability of engineered wood.

SMART GUARD
TREATED WITH
ZINC BORATE-BASED PROCESS

The SmartGuard process treats each wood strand throughout SmartSide and ProStruct Floor products with an advanced formula of binders, waxes and zinc borate to resist fungi decay and termites.

OUTDOOR BUILDING SOLUTIONS
Fight Back Against Termites and Rot

All LP SmartSide products are treated with our proprietary SmartGuard process to resist fungal decay and termites in harsh environments.

To prove it, LP SmartSide products are subjected to intense testing against moisture and thriving termite colonies in the jungles of Hilo, Hawaii. Even after years of exposure, LP SmartSide products remain structurally sound.

- Combats Rotting, Splitting, Delamination
 - Free of Knots and Patches
 - Resists Fungal Decay and Termites
 - Stands Up to Hail
 - Deep Cedar Grain Textures
- Superior Impact Resistance
 - Will Not Rust
 - Paint-ready Surface with Virtually Any Color Choice

OUR COLOR OPTIONS

URETHANE STAIN

Attractive Rustic Stains

Our urethane stains offer a beautiful stained appearance that is easy to clean and mildew-resistant. We also offer a variety of colors for you to choose from!

- Pigmented Urethane
- Water Base
- Hard Durable Finish
- UV Resistant
- Maximum Adhesion
